Applicant SUNGENE GMBH & CO. KGAA							
 This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 36. 							
2. This REPORT consists of a total of	5 sheets, including	g this cover sh	ėct.				
This report is also accompanied by ANNEXES, i.e., sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).							
These annexes consist of a tota	ıl of sheets.						
3. This report contains indications relation	ng to the following items:						
Basis of the report							
II Priority							
III Non-establishment of	opinion with regard to novelty,	inventive step	and industrial applicability				
IV Lack of unity of inven							
V Reasoned statement un citations and explanate	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement						
VI Certain documents cit	VI Certain documents cited						
VII Certain defects in the	VII Certain defects in the international application						
VIII Certain observations on the international application							
Date of submission of the demand		Date of completion of this report					
09 March 2001 (09.03.0	01)	02 January 2002 (02.01.2002)

IMTERNATIONAL PRELIMINARY EXAMINATION REPORT

mational application No.
PCT/EP 00/07807

. Statement			
Novelty (N)	Claims	2, 6, 9	YES
	Claims	1, 3-5, 7, 8, 10-18	_ NO
Inventive step (IS)	Claims		YES
	Claims	1-18	NO
Industrial applicability (IA)	Claims	1-18	YES
	Claims		NO

2. Citations and explanations

- The subject matter of the first claim contains 3 alternative subjects:
 - a) expression cassette containing a nucleic acid sequence that codes for HPPD or a functional equivalent thereof;
 - b) expression cassette containing a nucleic acid sequence that is capable of inhibiting HGD;
 - c) expression cassette containing a) and b).

Novelty (PCT Article 33(2))

2. WO-A-99/04021 (D1) describes a nucleic acid that codes for an HPPD from barley, and tobacco plants that are transformed using a corresponding expression cassette (Example 7, page 27). The tobacco plants transformed with the constructs have a higher tocopherol concentration in comparison with non-transformed plants.

This part of the subject matter (see a) above) of Claims 1, 3 (see D1, page 1, second paragraph), 4, 5 ("functional equivalent"), 7-8 and 10-18 is therefore anticipated by D1 in a manner prejudicial to novelty.

- 3. Claims 2, 6 and 9, which are dependent on this part, are novel.
- 4. The subjects of Claim 1 designated b) and c) above and the claims dependent thereon are considered novel.

Inventive step of alternatives b) and c) (PCT Article 33(3))

5. D1 is the closest prior art, the teaching of which is specified above. In comparison thereto, the present application proposes, in order to increase the tocopherol content of plants, to transform said plants using a construct that codes for a nucleic acid that is capable of inhibiting HGD activity, or using a construct(s) that codes for HPPD and a nucleic acid and is capable of inhibiting HGD activity.

The application therefore addresses the problem of preparing plants with an increased tocopherol content.

The application does not show whether the proposed alternatives can actually solve the problem (see Example 4). Consequently, an inventive step cannot be acknowledged for the above problem.

If it were possible to submit comparative results that show an increase in tocopherol content as a result of the specified constructs, then inventive step could be acknowledged, since none of the documents cited in the search report proposes suppressing maleylacetoacetate synthesis.

6. In the light of the data contained in the application, the **objective** technical problem addressed by the application is that of preparing transformed plants. Selecting from the variety of possible nucleic acids those that code for HPPD and HGD solves the problem in a non-inventive manner, since it is an arbitrary choice that does not result in a special technical effect. Consequently, an inventive step cannot be acknowledged on the basis of the objective technical problem.
